

LIKLAK 2001

Interactive Light Cube for Short Messages

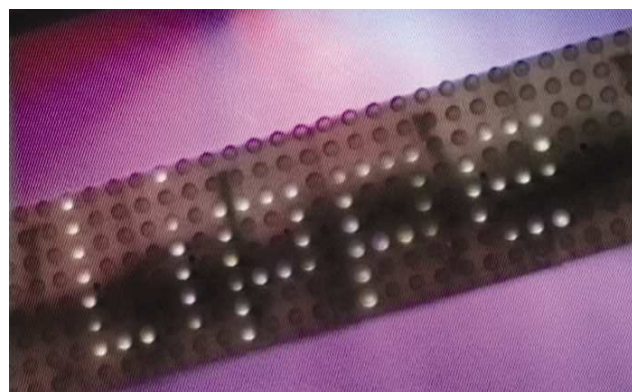

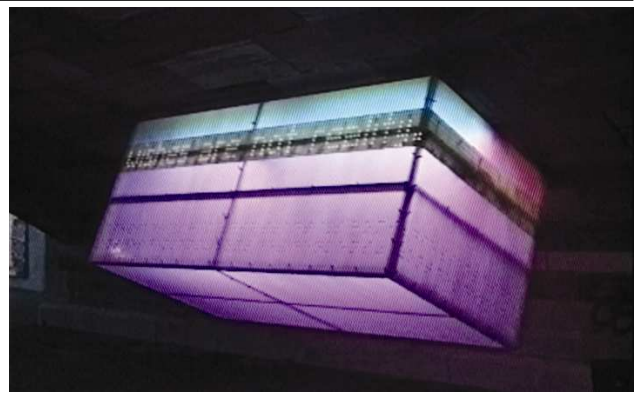

LIKLAK was an interactive light cube by Claude Hidber, that could be used as information carrier: By sending a short message from a mobile phone the ticker of the cube was activated.

The mobile LIKLAK installation was presented on different occasions in Basle and Zurich, Switzerland. Throughout the day it

frequently changed its colours and was used by the population as an interactive communication medium. In this way LIKLAK transformed urban non-places in light-flooded communication rooms.
